

Next Steps

Disclaimer: The following is not created, maintained, or endorsed by Docker. It is a reference guide to show a known and tested path for monitoring Docker Desktop in a production appropriate way

If you've setup all-in-one monitoring for test purposes and want to move on to a production ready architecture like below

then you can follow these steps with any [prometheus remote write compatible software](#) and a log collection endpoint or use the suggested configure to match the all-in-one deployment.

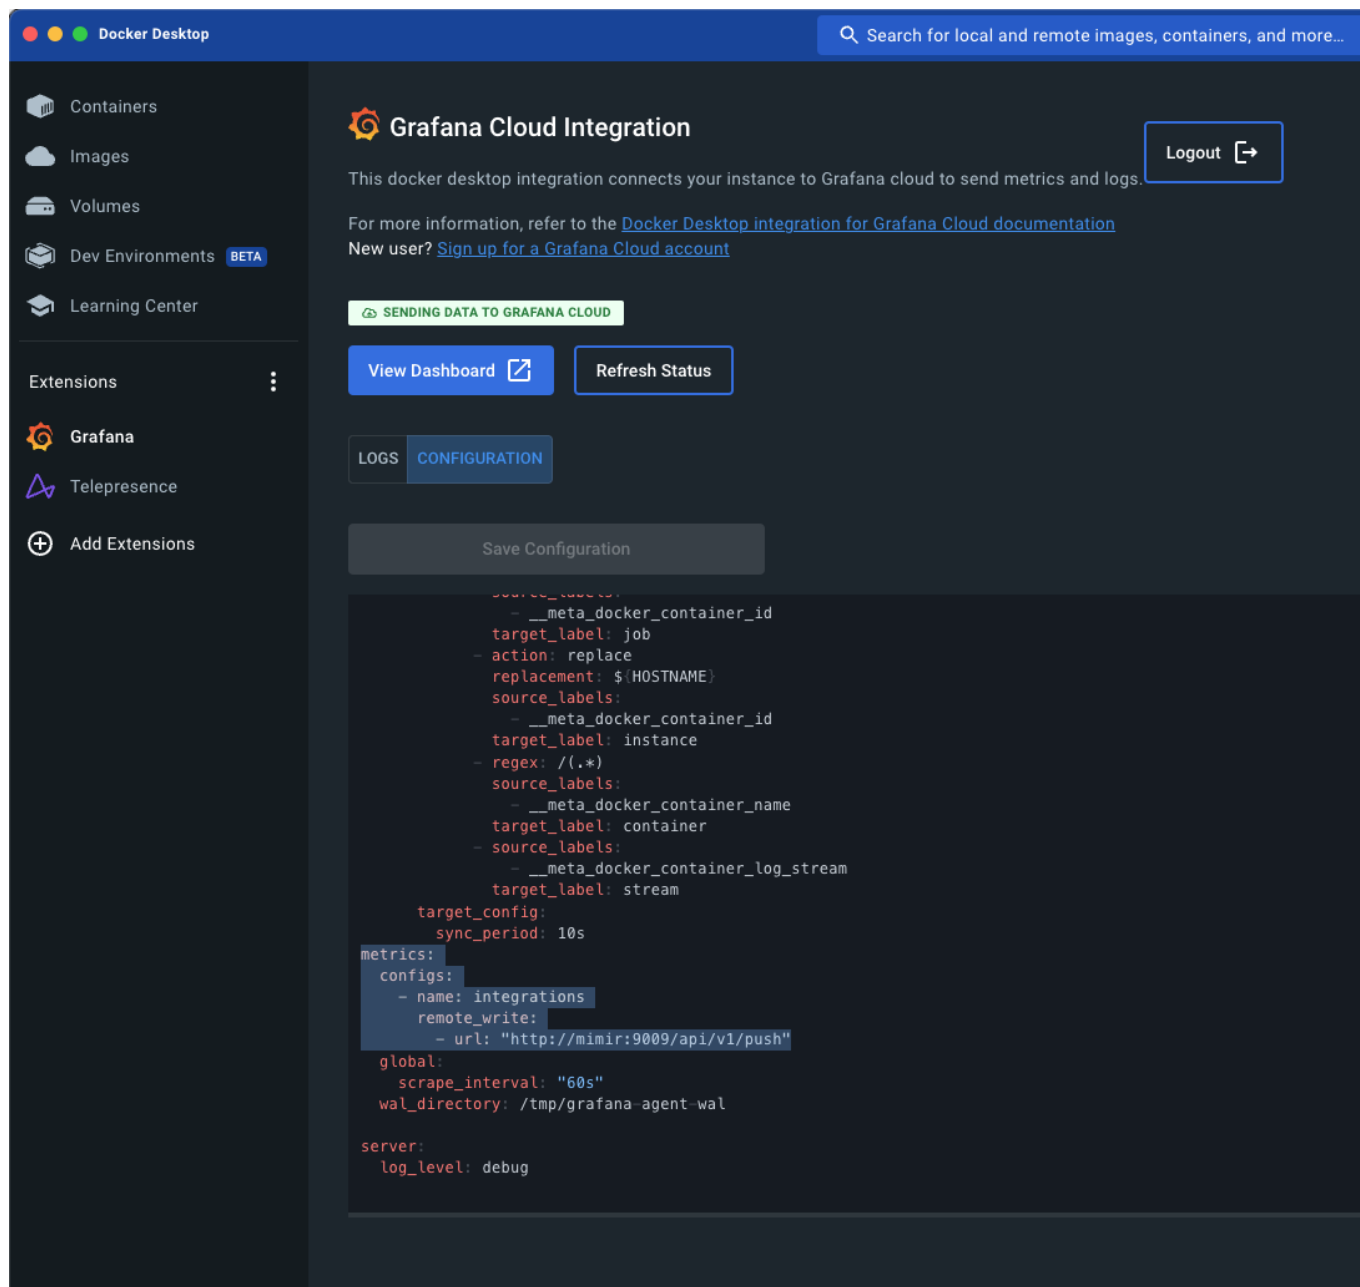

Step 1: [Install Loki](#) via one of the following options to a dedicated location

- [Using Tanka](#)
- [Using Helm](#)
- [Using Docker/Docker Compose](#)
- [Using Downloadable Binary](#)
- [Using Source Code](#)

Step 2: [Install Mimir](#) via one of the following options to a dedicated location

- [Monolithic Mode](#)
 - [Using Docker](#)
- [Microservices Mode](#)
 - [Using Kubernetes](#)
 - [Using Puppet](#)

Step 3: Update Docker Desktop Grafana Extension to point at your newly installed Loki and Mimir

Configuration sections that will need updating:

- [node_exporter Section](#)

```
...
node_exporter:
  enabled: true
  relabel_configs:
    - replacement: ${HOSTNAME}
      target_label: instance
  prometheus_remote_write:
    - basic_auth:
        password: "<Password>"
        username: "<UserName>"
      url: "http://SomeIPAddressOrDNSNameForMimir:9009/api/v1/push"
```

- [Logs Section](#)

```
logs:
  configs:
    - clients:
      - basic_auth:
          password: "<Password>"
          username: "<UserName>"
      url:
"http://SomeIpAddressOrDNSNameForLoki:3100/loki/api/v1/push"
...
```

- [Metrics Section](#)

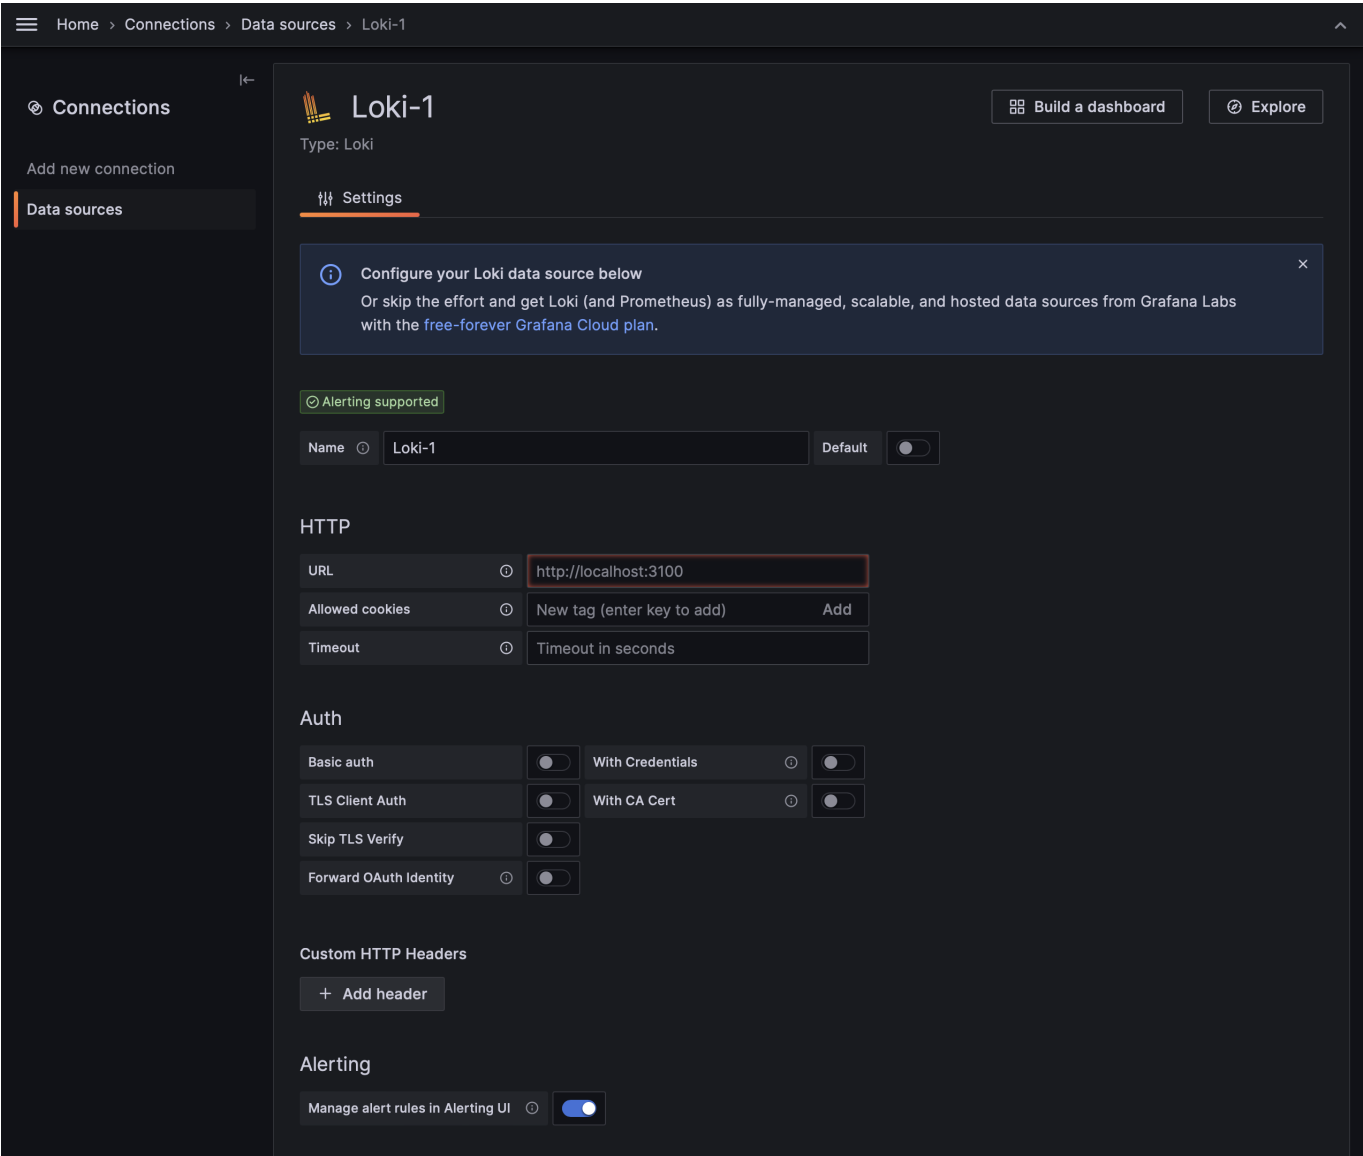

```
...
metrics:
  configs:
    - name: integrations
      remote_write:
        - basic_auth:
            password: "<Password>"
            username: "<UserName>"
          url: "http://SomeIpAddressOrDNSNameForMimir:9009/api/v1/push"
...
```

- Refer to the [Metrics Section Configuration Documentation](#) for more metrics configuration options.
- Refer to the [Logs Section Configuration Documentation](#) for more logs configuration options.

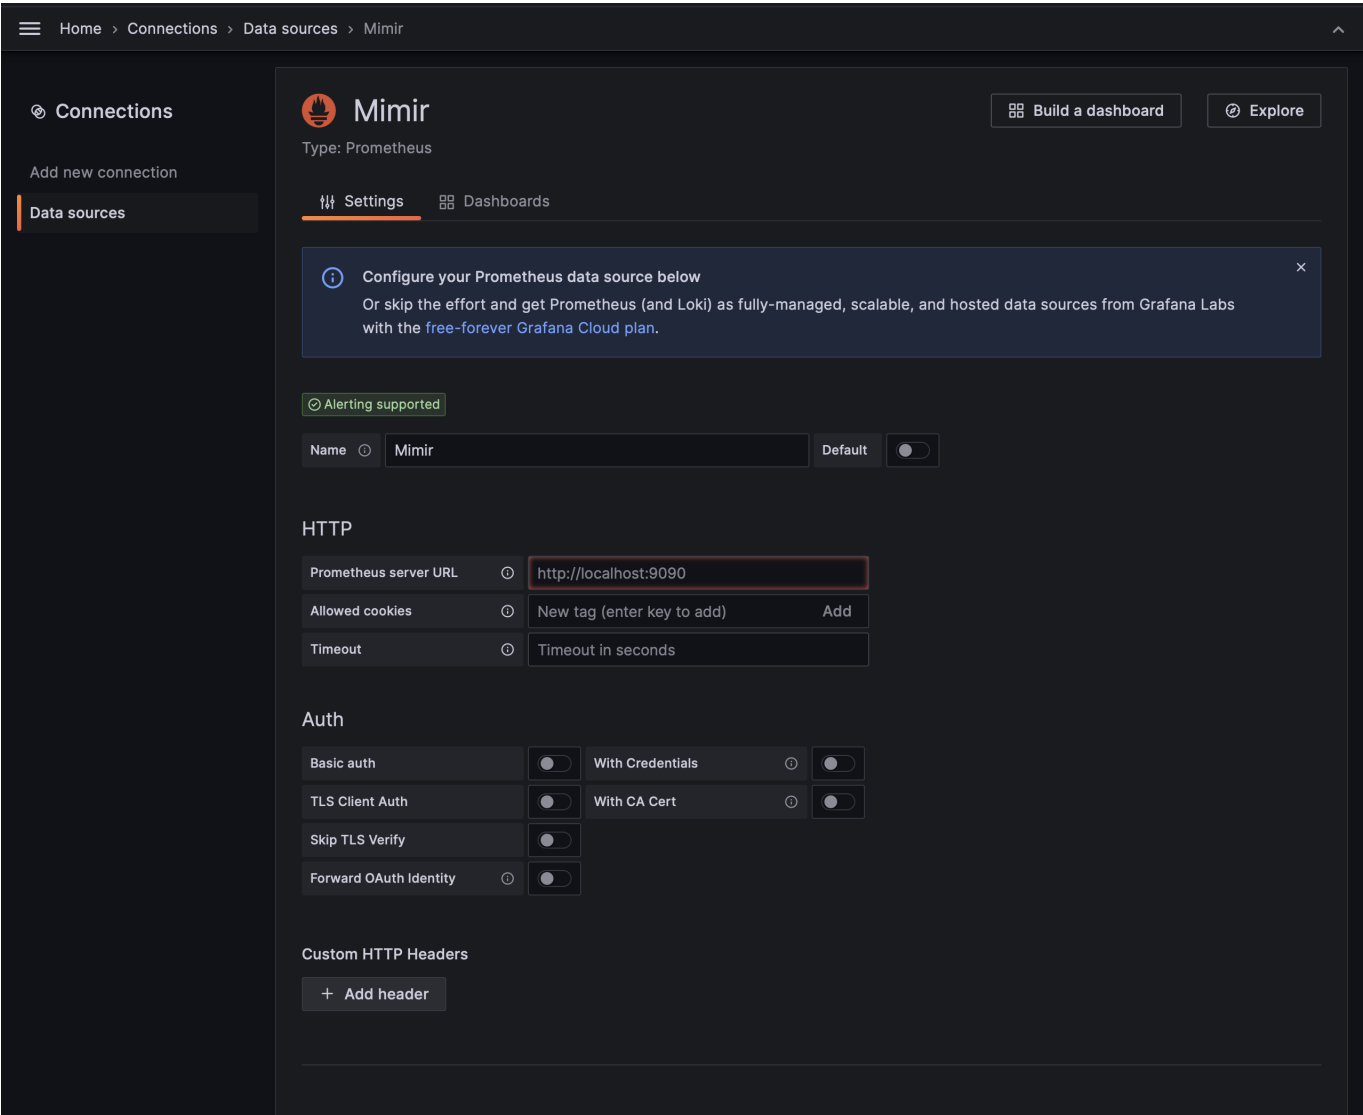

Step 4: [Install Grafana](#) to a dedicated location

Step 5: Point Grafana at Loki and Mimir

- Add Loki Connection

- Add Mimir (Prometheus) Connection

Step 6: Import Dashboards into Grafana

- [Overview Dashboard](#)
- [Node Dashboard](#)
- [Logs Dashboard](#)
